

UKL THERMOSTATIC STEAM TRAP :-

The enthalpy in the steam basically has two components : The Latent heat and the Sensible heat. Whereas condensate has only sensible heat. This condensate has to be removed as soon as it is formed, because it hinders to efficient heat transfer as well as leads to water hammer phenomenon as it is hot water (having more Specific Gravity) that moves with high velocity of steam (8 to 10 times higher than water), carrying enough momentum to rupture pipes and which is damaging to the plant pipelines as well as piping equipments. Hence, need to remove condensate from steam and trap steam. This is done by steam trap.

UKL Thermostatic trap has a unique Simple design, Minimum number of components and where the Bellow is enclosed and protected thus ensuring long life for the Bellows.

These traps used largely on Tracing lines or Tank Farms where steam is supplied to maintain Temp / viscosity of the Oil.

This trap works on the difference in Enthalpy of Steam and Condensate. Condensate temperature is used to open the trap by contracting the capsule, discharging condensate in low temperature. A capsule attached to a Bellow filled with precise amount of a Hydrocarbon, Expands and contracts in response to the rising/lowering of Enthalpy. Thereby shutting and opening the valve. Condensate has lower Enthalpy, causing the bellow to contract and the seat to retract which opens the valve and allow discharge of condensate and expands as soon as it comes in contact of Hot steam, causing seat to close the valve.

MATERIAL OF CONSTRUCTION:

ASTM A 105

SIZES AVAILABLE:-

½”, ¾”, and 1”

END CONNECTIONS:

Threaded to NPT , BSP and BSPT
Socket Weld to ASME B 16.11
Flanged - #150/#300/#600

INSTALLATION:-

Preferably in horizontal position.

OPTIONAL:-

IBR/Non-IBR
Blow down cock
Available in SS
Use as Air Vent .

OPERATING CONDITIONS :

Sub cooling Temp Available : 50-59 °F

Size	End Conn	BSP	NPT	SW
½”, ¾”, 1”	Press. Psi	177.8	455	455
	Temp °F	500	752	752

Spares Available:-

Capsule
Strainer
SPW Gasket

To clean or replace strainer remove strainer cap. Remove strainer screen. Fit new or cleaned strainer screen into recess in cap. A new gasket should be fitted and the cap screwed into the body.
